

Printing On Fabric

Bubble Jet Set 2000 is permanent ink set for inkjet and bubble jet printers. Use it to prepare your fabric before printing images from your computer onto the fabric. Here's how...

Without pre-washing your fabric, cut light colored 100% cotton into 9" (letter size) or 11.5" (A3 size) widths.

Get a flat pan, like a large plastic Tupperware bowl.

Fold the fabric strips accordion style so that they fit into your flat pan.

Shake the Bubble Jet Set 2000 well.

Pour the completely mixed Bubble Jet Set 2000 solution on top of the fabric making sure that the fabric is completely saturated.

Let the fabric strips soak in the Bubble Jet Set 2000 solution for 5 minutes.

Hang the fabric to drip dry. Do not ring out the excess solution. **DO NOT DRY THE PREPARED FABRIC IN THE DRYER.**

While the fabric is drying cut your freezer paper into 8.5" x 11" (letter size) or 11" x 17".

The fabric will be slightly stiff when completely dry.

Iron the plastic coated side of the freezer paper onto the one side of the fabric treated with BJS 2000.

Trim the sides of the fabric to the edge of the freezer paper using your rotary cutter. Make sure your edges are fray free so that loose threads do not get caught up in your printer.

Insert the fabric sheet into your printer so that the image will print onto the fabric.

Print your design onto the fabric.

Separate the fabric from the freezer paper.

Let the printed fabric sit for 30 minutes.

Machine wash, using the delicate cycle. Allow your washing machine to fill with water. Once the washer is filled with cold water stop it and add four caps full of Bubble Jet Rinse and put your prints in one at a time keeping them separate in the water. Turn the washer back on and let it agitate, rinse and spin.

Place prints and a dry towel in the dryer, the towel will stop the fabric bunching up together. Dry using the medium heat setting.

When your fabric is dry you can start quilting.

Bubble Jet Set 2000 printed fabric is 100% machine washable and dryable. It is advisable that you keep fabric out of direct sunlight as with any printed or dyed fabric to avoid fading.
